**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. Claims 10-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 10, the rotational viscosity should be less than 160 mPa S.

In Claim 11, the percentage of formula V from 0-30% is broader than claim 4 because the compound of the formula V is not an optional.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 and 8-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Tarumi et al. (US 5,993,692).

The reference medium based on a mixture of polar having positive dielectric anisotropy. The mixtures of Examples A, C and D on col. 18 anticipate the claimed invention.

Art Unit: 1756

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tarumi et al. abovementioned in view of DE 19603257.

The reference differs from the claim in that the claim has a multibottle liquid crystal system. However, the multibottle liquid crystal system is known in the art (see DE 19603257) and the liquid crystal mixtures in Tarumi having liquid crystal properties, which are suitable for twisted nematic display device. Therefore, it would have been obvious to those skilled in the art to utilize Tarumi's mixtures in the multibottle liquid crystal system.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
